

# Feel threatened? Safeguard your workplace!

## The primary benefits of the Cordaware bestinformed Alarm Edition at a glance

- Central, server-based administration and configuration of the clients
- Arbitrary configuration of keystrokes for triggering alarms
- Trigger alarms while screensaver is active, even with password-protection
- Trigger alarms on the logon-screen as well
- Easy integration of external input-devices, e.g. USB emergency-button
- Play sound without additional sound card (uses mainbord's piezoelectric sound)
- Individual formatting of alert and all-clear messages
- Individual display-options for alert and all-clear messages (banner, popup)
- Initiate multiple alerts at once for sending custom information to multiple target-levels
- Instant acknowledgement of receipt for initiator
- Post all-clear message per mouseclick
- Alert can be sent additionally by email or SMS gateway

## Cordaware bestinformed Alarm Edition

## Cordaware PC-Alerts per keystroke!

### For whom is the Alarm Edition designed for?

The Alarm Edition is designed for workplaces that are potentially in danger of assault, harassment, vandalism or similar threats.

- Civil Service and Public Authorities
- Hospitals and Administration Departments
- Sensitive Business Units
- Public and Private Security Services

### What are the benefits of using Cordaware bestinformed Alarm Edition?

For the affected users, the introduction of the Cordaware bestinformed Alarm Edition entails a considerable increase in workplace-security and -satisfaction. Sustainable positive effects are reduced stress symptoms as well as an increase in well-being and health.

The impact of these benefits is evident:

- Increased Employee-Productivity
- Increased Employee-Security
- Increased Employee-Satisfaction with significant Stress Reduction

### How does the Cordaware bestinformed Alarm Edition work?

On the occurrence of a hazardous situation, the affected employee presses a key or a key-combination on the PC's keyboard and immediately initiates a full-screen emergency alert. Instantly, the alert is displayed on every computer of the targeted recipient-group, for example the surrounding offices and the guard service. If desired, the alert can contain an acoustic alarm as well.

#### Discrete Alarm-Initiation

From the perspective of the initiator, the alarm is silent, meaning that the alarm is triggered imperceptible for other persons in the room.

#### Instant Acknowledgement of Receipt

Instantly after the alarm is triggered, a status-window is shown to the initiator, displaying the number of recipients and the number of confirmations. This way, the initiator can rest assured that the alert was recognized and that help is on its way. The instant acknowledgement of receipt supports the initiator to remain calm and to psychologically master the situation.

#### All-Clear notification per keystroke

In case the hazardous situation is resolved, the initiator of the alarm can post an all-clear message. This all-clear message can be displayed as a banner instead of a full-screen message.

### What is the Cordaware bestinformed Alarm Edition?

The Cordaware bestinformed Alarm Edition is an extension of the bestinformed Professional Edition. It provides additional features, which specifically aim at fulfilling sophisticated requirements for PC-based emergency alerts.

Cordaware bestinformed Professional Edition has its emphasis on instant mass-notification of a broad recipient-base, e.g. in case of incidence or evacuation. In addition, the Alarm Edition gears to the targeted distribution of on-screen alerts per keystroke to a select number of recipients only, for example surrounding offices or security personnel.
